

HDMI-USB Capture

DEAR CUSTOMER

Thank you for purchasing this product. For optimum performance and safety, please read these instructions carefully before connecting, operating or adjusting this product. Please keep this manual for future reference.

The Vanco HDCAPT1 is a device that allows an HDMI source to be streamed or recorded, resulting in converted content that can be viewed on computers and other commonly found capture software locally and/or remotely. With today's changing world of virtual attendance, the HDCAPT1 can be utilized for virtual learning, meetings, or to stream a worship service for instance. HDMI signals from video recorders, webcams, game consoles, and mobile devices can be converted to be recorded or live streamed. Easy to install and connect, the HDCAPT1 simply connects HDMI to a source, and USB to a computer with the software available to download from Vanco's website. With the ability to accept 4K@30Hz resolution, the HDCAPT1 is a great solution to capture HDMI signals and send to a remote audience, or to record for playback.

FEATURES:

- Converts an HDMI signal into content that can be recorded and/or streamed
- Utilize for virtual learning, meetings and more
- Perfect solution for HDMI sources such as video recorders, webcams, game consoles, mobile devices, etc.
- Works with open source software for video recording and live streaming such as OBS, VLC, etc.
- Supports source resolutions up to 4K@30Hz
- Supports USB 2.0
- Compatible with Windows, Android and MacOS
- No external power supply needed
- Compact and portable

SPECIFICATIONS:
